

Sasha

Sasha is a 3 year old German Shepherd that lives with Daniel and Joyce Olson. Daniel and Joyce adopted Sasha from the German Shepherd Rescue Alliance of Wisconsin. Sasha, originally called Pixie, was found in Illinois after a tornado on Thanksgiving Day. She was located in a storage container owned by a horder with several other cats and dogs. When she was found the rescue determined that she was about 8 months old and weighed 18 pounds. When the Olson's adopted her in February of 2014 she had increased her weight to 39 pounds. Sasha bonded with Daniel as soon as they saw her. Daniel and Joyce adopted Sasha to be a compaion to their disabled German Shepherd, Noah, who passed away in 2015. Sasha and Noah got along great and Sasha loved getting him to play when he had never played before. Sasha is very social and has her Canine Good Citizen title and her Community Canine title.

Sasha enjoys sleeping in either the dog bed at the foot of Daniel and Joyce's bed, on the couch or on the bed in the guest room where she can see what is happening outside the house. Sasha is actually a picky eater when it comes to treats, she only likes Beggin' Strips and Charlee Bear treats. She loves to carrie bones around and hide them in specific places before she goes to bed at night. Her favorite toys are Jolly Balls, that she will shake back and forth, as well as tennis balls and squeaky balls. She also loves to destroy soft toys. She likes to play, go for walks, chase squirrels and chipmunks, and rides and play with other dogs. She also loves to ride on the boat and go fishing. Sasha will play "hide the ball" with Daniel where he will lay on the couch and hide the ball for her under the blanket. Sasha also likes to jump off of the top step and land in the living room and she tires herself out with "zips" where she will run around the house.

Daniel and Joyce are very proud of the rescue dog success story the Sasha has become and the doctors and staff look forward to seeing Sasha and the rest of her family for years to come.
